Assessment. Land Revenue - Coimbatore, Kollegal tk Tellicherry and Chirakkalur villages - Remission Unnecessary.

Assessment. LR. 71344. (Coimbatore)
Kollegal Tk. Collection. Proposals

Ref. M6534-34.1 & 18-12-34

In the season report for the week ending 15-12-34 the Collector has stated that the harvest of ragi is proceeding in parts in the Kollegal Tk and the outturn is below fair. His attention is invited to para 5 of BSO 14 under which tracts in which the average outturn of crops is six annas and below will be eligible for graded remissions. He is requested to watch the harvests of all the dry crops in the taluk and to submit a report on the need for granting remissions under BSO 14, if the average outturn is less than six annas for the whole taluk or for a group of villages in the Tk.

2/ 2t is requested that the report may be sent by the 20th Jan.

Reference M.6534-34-2 dt 16.1.35

In the season report for the week ending 12.1.35 the Collr of Coimbatore/Ramnad has stated that the standing dry crops are withering in parts. He is requested to report very urgently, before the 24th instant, whether there will be any need for the grant of dry remissions under B.S.O. 14 in any parts of the District, and if so, to submit his proposals at a very early date.

2. The Collr of Coimbatore is requested to submit the report referred to above in respect of the taluks of Tiru

than Kollegal for which
a separate report has
been called for in the
BOS Ref-No M6534-34-1, 8 pertaining thereto
18.12.34.

M a d r a s.

Sir,

plef

Board's Ref.M. No. 6534/34 -1 dated 18-12-34

***

The most important crop raised on dry lands, in Kollegal taluk, is ragi. In most villages two crops are raised on some of the dry lands - namely cholam or gingelly, followed by horsegram, cumbu or Bengal-gram. On the lands on which ragi is raised, no second crop is raised. In 1934 there was a fair harvest of the first dry crop in Kollegal firka and part of Singanallur firka. The outturn of Cholam was 8 annas and that of gingelly 4 to 7 annas. Subsequent to the rains in October last, the cultivation of dry crops proceeded all over the taluk and the state of the standing

ops is at present fairly satisfactory.

2. At present dry crops are standing on a large area. It ll be possible to arrive at a more correct estimate of outturn soon as these crops are harvested. The harvest will be mpleted by February next. Some crops have recently been rvested. Their outturn is as follows:-

Name of crop	Outturn
Samai	- 6 annas
Cumbu	- 4 to 7 annas
Gingelly	- 4 to 8 annas
Ragi	- 4 to 8 annas
Avarai	- 4 to 8 annas
Cholam	- 4 to 7 annas
Thenai	- 4 to 7 annas
Chillies	- 8 annas
Greengram	- 8 annas
Blackgram	- 8 annas

But the extent harvested is small as compared with the area yet to be harvested. The probable outturn of the standing crops, as estimated by the Tahsildar and the Revenue Divisional Officer during their inspection, is as follows:-

Ragi	-	4 to 8 annas
Cholam	-	4 to10 annas
Cumbu	-	4 to 8 annas
Thenai	-	5 to 8 annas
Avarai	-	4 to 8 annas
Horsegram	-	2 to 8 "
Bengalgram	-	3 to12 "
Castor	-	4 to10 "
Tobacco	-	6 to12 "
Gingelly	-	4 to 8 "
Mustard	-	8 annas
Coriander	-	8 "
Chillies	-	8 "
Thuvarai(Redgram)		4 to 8 annas
Samai	-	4 to 6 annas

3. Taking all the dry crops, the average outturn was 8.39 annas for fasli 1341, 8.78 annas for fasli 1342 and 8.02 annas for fasli 1343. In the current fasli, the average outturn of standing crops and harvested crops taken together will work out to not less than 5 annas. In arriving at this estimate, the case of horsegram has been duly considered: In some villages, the crop is quite good and will yield an outturn of over 5 annas. In some villages, the horse gram sown late is still young. If there should be no more rain, in this or the next month, the young crops may suffer. Although the cultivation of ragi has suffered a little, the cholam and cumbu crops are generally good this year. The mulberry crop also is good, the outturn being not less than 8 annas everywhere.

4. Under Board's Standing Order No:14-5(2) no relief need be granted

Ms 35 Dated 6-1-44

in respect of tracts in which the average yield is one half of the ordinary yield or more. In the Kollegal Taluk, the ordinary outturn, taking all the dry crops into account is 8.40 annas, worked on the basis of the outturn of the last three years. Half of this is 4.20 annas. As the average during this year, will not be less than 5 annas, the dry lands are not entitled to any remission under the rules. The concession of dry remission may, however be required for Tellanur and Chikkailur in Binganallur firka and Kaggiam in Hanur firka, where the crops look a little poorer than elsewhere. The harvest of the crops will be watched in January and February, and a further report made as soon as possible as to whether any remission is necessary for them.

only three villages

5. The rainfall statistics of the years 1931 to 1934 show that the total rainfall in 1934 was nearly equal to that in 1931 as shown below:

1931	-	25.59 inches
1932	-	36.55 "
1933	-	39.26 "
1934	-	24.22 "

There was no remission of dry assessment in fasli in 1341. The recent orders of Government suspending the collection of land revenue, in the current fasli, at the rate of one anna in the rupee for dry lands, will be some compensation for the poorer yield of this year.

Sir,

Subject:- Assessment -- Land Revenue - Dry - Remission.

ENCLOSURES.....

Reference:-- Board's Reference -. 6534/34--4 dated 1-2-35.

SPARE COPIES

The report was based on the replies of the Taluk Officers to my reference to them on the subjct supported by the Sub Collector. I assumed that before sending ~~this~~ their replies, they had -- considered the outturn with reference to Board's Standing Order No. 14 para 5, but to be sure on the point I am calling for definite reports from them.

2. I may add that when drafting ~~any~~ my reply, regard was had to the outturn of the harvested crops as noted in the weekly -- season reports. The Tahsildar Srivilliputtur ~~says that~~ had noted in his report for the 1st week of January that the outturn under Samai, and Varagu was 0--3 annas. These are crops not extensively grown in that taluk, and as regards other crops the Seson report ~~recorded~~ revealed that the outturn was mostly 4--7 annas during the subsequent weeks. This fact coupled with the specific report of the Tahsildar that the conditions were not so calamitous as to warrant the grant of dry remission made me conclude that the conditions necessary to establish the existence of "wide -- spread calamity" did not exist to justify resort to Board's Standing Order No. 14(5).

3. I shall submit a further report after I hear from the taluk officers in reply to the reference I am making to them now.

Reference:-- Board's references M.6534--34/4 and 5 dated 1-2-1935 and 12-2-1935.

The Taluk Officers have all reported that, when submitting their replies to my reference on the subject, they took into consideration the outturn of the harvested and standing crops. The outturn reported by all these officers except the Deputy Tahsildar, Paramakudi ranges from 4--8 annas generally and in certain cases in Sattur and Ramnad taluks to 12 annas and above. There is, thus, no need to consider the question of the grant of dry remissions in these taluks.

2. In Paramakudi, however, harvests did not take place by the time my report dated 23-1-1935 was submitted. The outturn reported later on was below 2 annas and 0--4 annas. The Deputy Tahsildar has stated that the first sown dry crops withered and that the ryots could not count upon them. But the rains -- between the ~~21st~~ 20th and 22nd January 1935 were beneficial, in that, the ryots were enabled to sow cambu and gingelly. As matters stand at present, the Deputy Tahsildar expects these crops to yield an "appreciable" outturn. In these circumstances, I do not think that there will be any necessity for the grant of dry remissions in this taluk either.

Settlement, Madras.
~~Department.~~

Sir,

bgcf

Board's Ref.M.No. 6534/34-3 dated 21-1-1935.

***

With reference to the question of granting the concession of dry remission for Tellanur, Chikkailur, Saggiam and Goraiyur villages (Goraiyur being a village in Saggiam group with a separate set of village accounts), I give below a statement explaining the ~~the~~ state of affairs in the curren fasli and in the three previous faslis.

Name of Village.	Average outturn in annas in F.1341	Average outturn in fasli 1342	Average outturn in fasli 1343	Average outturn in F.1344
Tellanur	7.18.	8.44.	10.55.	4.13 6-4
Chikkayalur	7.19.	8.31.	10.16	3.71 4-2
Saggiam	4.01.	4.91.	4.11	5.02 [illegible]
Goraiyur	4.10.	5.24.	4.17	4.40 [illegible]

24 pp6-7 cf.

As stated in paragraph 4 of my letter Ref. 13999/34 dated 18-1-1935, the ordinary outturn in the Kollegal Taluk, taking all the dry crops into account is 8.40 annas worked on the basis of the outturn of the last three faslis. The average outturn in Tellanur and Chikkayalur villages during the current fasli is between one half and one third of the average yield for the taluk. I therefore recommend that a ~~revision~~ remission of 25 per cent may be granted in respect of the dry lands in Tellanur and Chikkayalur villages, with reference to B.S.O.No. 14-5(ii).

p 35 B80 Vol I

2. In the case of the remaining villages, I do not consider that any remission of assessment is necessary, as the average outturn in them is more than half the ordinary yield. The land revenue collection for the first kist is reported to have been satisfactory throughout the taluk.

L.Dis. No. 3131/1935

Station Coimbatore, *Dated the* 5th April 1935 19

From (Name) A.H.A.Todd Esq.,I.C.S.,

(Designation) Collector of Coimbatore.

To The Secretary to the Government of Madras,
Commissioners of Land Revenue and Settlement, Madras.

Sir,

Board's Ref.M.6534/34-6 dated 13-3-1935.

***

I give below the particulars required in paragraph 2 of B.S.O.14, under each item mentioned in it.

(a) The Outturn for the year, of the dry crops both early and late, in the tract.

Detailed statements showing the average outturn for each village and the particulars of crops harvested with their respective outturn during the current fasli, as well as the three previous faslis, are enclosed. The statements show that the average outturn of all crops works to 4.13 annas in Thellanur and 3.71 annas in Chikkailur - just

elow half of that in the previous three years. The deficiency in the utturn is due to want of sufficient rains during the current year.

(b) & (c). The crop history of the tract during the two previous years, and the abundance or paucity of irrigation sources including wells etc. P34 B&N vol

A statement is given below showing the particulars of rainfall in the two villages during this year, and the previous two years, as recorded in the village account No.20. It may be observed from the statistics of rainfall that the rainfall for 1934 was less than half of that in the previous year, and that there was no rainfall after October 1934. There are no irrigating wells in the two villages. All the crops are raised and fed by rains. Gingelly is raised on small areas with the help of rain in April to June. Usually the rain is not plentiful in this season. The yield of the crop is generally poor to fair. After the rains in or after July, extensive cultivation commences. Ragi is the main crop, and it forms about half to two-thirds of the cultivated area. It is sown from July to September and is harvested from November to January. Horsegram is the next important crop. It is sown in October and November and harvested in January and February. It is usual to get good rain in August to October, the sowing season, and light showers thereafter. The rains after October sustain the crops and help them to come to maturity. Owing to the absence of rain in August and September and after October, there was not only decrease in the cultivated area, but also in the outturn of crops.

Statement of rainfall in inches in Thellanur and Chikkailur.

	1342 --- 1932	1343 --- 1933	1344 --- 1934
June	1	¼	½
July	-	2¾	¾
August	6½	4¾	-
September	1	-	-
October	5½	6½	6¾
November	4	2	-
December		1	-
	18	17¼	8

p34. Dec 1 cl I (d) The prices of produce prevailing in the year and probability of prices ruling high in the next season also.

pp31-34 cf A statement is enclosed showing the prices of ragi and horsegram (the principal grains of the tract) from January 1934 as recorded in the register of prices of food-stuffs, maintained in the Taluk Office. Though the prices are high, they are not beneficial to the ryots owing to the exceptionally poor yield of the crops. There is no likelihood of the prices going down materially in the near future. If the coming season is good, the prices may fall a little. Otherwise, there is a likelihood of their going up.

p34 Dec 1 cl I (e) Any special local circumstances which may indicate the need for relief.

There are no special local circumstances worth mentioning except that the villages lie in an outlying part of the Taluk on the border of reserved forest, and that the ryots are generally poor. They live on the produce from their lands supplemented by what they can get by the sale of cattle which are reared in considerable numbers. As the price of cattle has fallen the resources of the ryots have been affected to a considerable extent. They live rather on hand to mouth existence. A

2. In the circumstances the remission of 25 per cent of the kist, will be a great relief to them in their present condition. I therefore reiterate my recommendation made in the last sentence of para. 1 of my letter L.Dis. 13999/34 dated 6-3-35. B

p 31 cf

~~Order~~ / Resolution ~~Roult~~ (Ms.) No. 1662, dated 30.4.1935.

"Full Board"

by NJ

The crop history of Faslis 1341, 1342 & 1343 shows that those were good years. The average outturn of the crops in the current fasli is reported to be 4·13 annas in Tellanur village and 3·71 annas in Chikkailur village. The Board does not therefore consider that there is any justification for the grant of further concessions for these two villages, besides the general suspensions ordered in G.O. No. 68 Rev. dy 10.1.35.

Note file

Dry remissions — Coimbatore & Ramnad districts.

To Joint Secretary

p11cf The reports of the Collrs of Coimbatore (& Ramnad) show that no dry remissions will be called for in these Districts, except in p15cf three villages in the Kollegal Tk. p7cf of Coimbatore.

2. The interpretation of the p35cf Collr of Coimbatore of para 5 of B.S.O. 14 is, however, submitted for consideration. The Collr moved take the ~~average~~ yield in this para as meaning the average of the ~~four~~ three p7cf years. He has compared the outturn of this year in the Kollegal taluk with the average of the three preceding years and arrived at the conclusion that no remission is called for, as the outturn is not less than one half of the average of the ~~four~~ preceding years. I cannot

outturn is denoted by 12 annas and this should, it seems, be taken as the "normal yield" referred to in para 5 of the S.O. P 35 TOR Vol I

If this is done, there will be no need to take the average of three prior years for comparison. If the actual outturn this year is ~~two~~ six annas & less, the scale of remissions given in the para will begin to operate, though it is remembered that remissions are granted as a matter of grace. It is nowhere laid down that three years' average should be taken. If the average of a longer period, five or ten years, be taken, ~~the~~ the comparison may possibly yield a different result from that arrived at by the Collr. It is therefore for orders whether Kottigal taluk with an average outturn of five annas would not deserve remission of 25% and whether it is not necessary to explain the

brief, introduction

proper interpretation of the term "normal yield" to the Collr. and to call for detailed outturn statements for all unprotected dry and wet in the villages of the taluk with a view to seeing how much remission the taluk or portions thereof deserve.

I think the Collector of CBE should be told that the 'ordinary yield' referred to in the B.S.O. is the normal yield which for statistical purposes is taken as a yield of 12 as.

The Collector of Ramnad has not referred to the Govt orders in the taluks: presumably he has examined these.

M 1248.35 from the Collr of Ramnad. p21CF.

To Joint Secy

The Collector of Ramnad considers that there is no need for the grant of any concessions in his district. p21CF

2/ A further report is due from the Collector of Coimbatore in respect of three villages in Kollegal. On reply to the Board's Ex. reminder of 8.2.35 the Collr. stated that their report called for from the R.D.O. Kollegal had not been received and that he would submit his reply soon after its receipt. It may be requisitioned on 15.3.35. p9CF p20(a) CF

[illegible]

To 2nd Secy

Please see the Collector's report at pp 23-24 ef. He recommends remission of 25% the assessment on dry lands in Hallanur and Chikkaiahnapalya villages. Kolar. 1

2) The average outturn in 7 Fs. 4 is between 4 and 2 annas in one village and between 6 and 4 annas in three villages. In accordance with the scale I para 5(ii) of BSO 14 the village Chikkaiahnapalya which has an outturn of 3.71 annas is eligible for a remission of 50 to 75%. While the remaining 3 villages [illegible]. The Collr. has based his recommendations on the average outturn in the taluk during the ~~past~~ last three faslis. and has recommended a remission of 25% for the first two villages and no remission for the remaining three villages. For the purpose of granting relief under this Regn. the ordinary yield (or the normal) of 12 annas, should be the basis for [illegible]

cultivation such as the
condition and to suit the average yield
was adopted by the Collr. Please see in
this connection para 2 of the office note
at pp 1-3 of A & B
at the top of p3 of the orders.

As, after all, only two villages in this taluk which originally caused some anxiety, are affected, it seems that the Collr's recommendation to grant a remission of only 25% on all the unprotected dry lands in them may be supported. Remission (now proposed) of 4as in the rupee + 1 anna in the rupee of the assessment suspended with reference to the general orders of the Govt., may give adequate relief to the ryots.

~~The Collr has separately been asked to report the amount involved~~

The total dry asst. on the occupied drylands in these villages a/cdg to the resett. registers is Rs. 2,875. Information regarding the asst. on lands protected by wells, natural sources & topes, is not available. The amt. of remission will not exceed Rs. 720.

Telamu 2085
Chikkaiahu 790

What is the average rainfall in the Taluk & do dt? The figures do not convey any impression

with 1931 figures.

In the case of the two villages for which remission has been recommended their crop history shows that they have good crops in the previous years. One bad season like the two villages appears hardly sufficient to justify the grant of dry remission. The Collector has not specifically reported on points (c) & (d) of BSO. 14 (2). I suppose it may be presumed that the dry crops are the main crops in these villages

9.3.

To J.S.

The average rainfall at Kollegal station (average of 51 years ending 1920) is 34·12. The actual rainfall of 1931 to 1934 is given at p. 7 c/f

The two villages are purely dry villages. There are no irrigation sources in them according to the resettlement registers.

Shd orders whether the Collr may be asked to report in detail on the relevant points referred to in para 2 of BSO 14 and to state the Spl. local circumstances justifying the

the grant of 25% remission in these
two villages.

To Joint Sec

Draft Submitted

[Issued as Board's Rep: M 6534.34-6 of 13.3.35 — pp 25-26 cf
M 2523 from Collr — pp 27-29 cf]

To J. S.

The Collr. has submitted a detailed report — a report on the lines of B.S.O 14 para 2. Called for in the Board's Rep: at pp 25-26 cf. — pp 27-29 cf — p 34 BSO Vol I

The Collr. reports that there are no special local circumstances worth mentioning except the fact that the villages lie in an outlying part of the Tk. on the border of the reserved forest and that the ryots are generally poor. He reiterates the recommendation already made by him in para 1 of his letter at p 24 cf. — p 29 cf

2/ Attention is invited to the J. S. remarks at

at p 7 above.

For orders as to the recommendations made by the Govt.

17.4.35

So far as is known there has been no suspension or remission in y L.R. in Khagal taluk for the past over ten years - The Crop history of fasli's 1342 & 1342, 1343 shows that these were Good years - There are no Spl. features which justify remission in these two villages -

The rain fall in 1344 was only half of that in fasli's 1342 & 1341. The average Outturn of the Crops as reported to be 4.13 annas in one Village & 3.71 annas in the other. Prices are reported to be high, but this does not matter very much to the ryots who have nothing or only very little to sell -

The question is whether any relief is necessary and if so what shape it should take.

In the Case of Chittoor taluk & Trichy taluk where the average outturn of dry Crops last year was less than 2 as, the Board recommended only a Suspension of 7 as. If any

relief if Calcutta for all, it may take the form of suspension of 30 or 40 or 50 lakhs at the most. Even this appears unnecessary - There has been quite a lot of rain in Khulna district recently and the villagers have been [illegible] sowing Aman according to the latest season report - There is apparently no hardship or distress about Khulna district at present.

See Commissioner's letter to Calcutta dated 1.2.4 Cp. Sheet marked A & B

HL 17.4

I agree with J.S. 17.2.35

HL

8
P.B

I would accept the Calcutta recommendation - a reduction of 4 or 5 lakhs in the rupee

HL
17.4

On the general question of dividing municipalities in districts other than those which fall within what may be called the Jamuna zone I have expressed my views in the file on municipalities generally (which unfortunately has not been found up with this file).

UTH WF in (D)

the case of Tinnevelly I unwillingly reluctantly accepted the view of my two colleagues that remission might be recommended: ~~but regarded~~ but regarded the fact that my doubts, as to the wisdom of the course which was ~~to~~ being pursued, remained.

I am reluctant to agree to any further deviation from the principles embodied in the ~~Rs~~ RSO as the governing ~~dogma~~ ~~in~~ the grant of ~~fa~~ fasli remission would decline to recommend any remission (or suspension) of revenue in the case of Kollegal

24.4.35

This case is very much weaker than the case of Tinnevelly ~~so far~~ as I can gather from D.

The Collis recommendation in para 2 a. p 28 C.F. is ~~half~~ half hearted & it looks as if his heart has got the better of his head in this respect. I have the advantage of some acquaintance with Kollegal. The main industry is cattle breeding. vide. ~~sub~~ para (e) on Collis report on p. 28 C.F. as the idea of remission is really based on the low prices which can be realised from the sale of cattle

I.S. the plea of hard times & low prices. This has been met by the general remission for which I could not find any justification when writing the proposal. Before I would on leave I find no justification for any remission in Kollegal's three villages' assessment & am in agreement with the views of M2

25
27.4.35

SECY
29 APR 35

To Joint Secretary

M1 & M2 are against any concessions being granted, while M3 is for the grant of 4as remission proposed by the Collr. For orders whether the file should be recirculated to M3.

29/4/35

29.4.35

M3

This is not a case which is exempt for thing to give any the relief against reduction of any kind
